

SPRAY BOOTH EXHAUST FILTER - FIBERGLASS

Description

Fiberglass spray booth filters are made from a thick mat of interwoven fibers, designed to provide high-efficiency filtration. This dense construction effectively captures overspray, dust, dirt, and other airborne contaminants, preventing them from escaping into the environment or affecting the quality of your spray work.

A key benefit of these filters is their impressive holding capacity. They can trap a large amount of particles without restricting airflow or reducing performance. This means longer filter life, less frequent maintenance, and consistent airflow—keeping your spray booth clean and efficient.
